MULTIPRESS INSTALLATION APP

CHECK EVERY SIGN JOB UP TO AND INCLUDING DELIVERY.

As a sign & large-format company, you know that a job is only complete once it has been assembled. And that's where things sometimes go wrong. What if a job takes longer than planned, a traffic jam upsets the planning, or something goes wrong with the installation so that the customer is not satisfied?

With the **MultiPress Installation App**, you will keep full control of each job, up to and including the final result. The app gives your mechanics on their smartphones (iPhone - Android) a full briefing from the centrally managed project files in the MultiPress ERP/CRM. They can arrange the assembly and delivery, log time, add images to the file, and register the customer's approval, all in real-time. Not only very easy to use but above all efficient to follow up projects smoothly until the finish.

Make your mechanics smarter and more efficient: real-time monitoring of every project, on-site and without administration.

MultiPress Installation App

Mechanics and other 'Mobile employees' using the MultiPress Installation App work much smarter and more efficiently. Moreover, they work in real-time so that the administrative follow-up of each job can be completed much faster.

Some features of the MultiPress Installation App:

The installation technicians always have the **correct planning in the right order** and can drive directly from job to job so they can plan their driving and working hours efficiently.

Each job contains the **assembly instructions**; the mechanics on site will not lose any time to find out exactly what needs to be done.

The **time worked** will be **recorded** locally with the start/stop timer. The app forwards the data to MultiPress in real-time.

Problems, comments, or surprises on site? These can be added to the file via a simple **memo field**.

Images of the delivered work can be uploaded directly into the app and added to the right project in MultiPress. This makes remote quality control very easy.

About Dataline and MultiPress

Dataline Solutions develops ERP business software for dynamic offset, print, finishing, sign, large-format & textile printing companies (MultiPress) and advertising & communication agencies (QuoJob).

MultiPress is an MIS/ERP software solution developed from the needs of the graphics industry that links all administrative, commercial, financial, and logistics processes within the graphics company. MultiPress is used in 19 countries and is available in 11 language versions.
